

Storage:

Typically shortly after Winter Break we see students run into issues with storage and begin running out of room on their iPads. Running out of storage can cause the iPad to run slower, keep certain apps from functioning, and prevent new projects from being started. To check a student's storage, go to Settings, select General, and then tap on to Storage & iCloud Usage. There we can see the amount of used and available space and tap on Manage Storage for more details on which apps are taking up the most room to see what is hogging the space and what the user might be able to take off to make more room. The beginning of a new semester is the perfect time to check storage and make sure there is available space for the rest of the year!
